

## Для Windows:

```
Python -m venv env
```

```
env\Scripts\activate
```

Отрываем powershell от имени администратора и : Set-ExecutionPolicy RemoteSigned <https://medium.com/@ph1174/python-venv-%D0%BD%D0%B0-windows-10-2118ad685b1>

<https://python.land/virtual-environments/virtualenv>

```
python -m pip install --upgrade pip
```

```
py -m pip install Django или
```

```
pip install -U django==8.0.4 или
```

```
pip install -r requirements.txt
```

```
pip freeze > requirements.txt
```

```
django-admin startproject ProjectName ../ProjectName
```

```
ALLOWED_HOSTS = ["*"]
```

```
python manage.py runserver 10.0.2.15:8000
```

<https://docs.djangoproject.com/en/4.1/intro/tutorial01/>

```
deactivate
```

## AppName

```
python manage.py -h
```

```
python manage.py startapp AppName
```

## Конфигурирование и запуск Django (после GitHub)

```
git clone https://github.com...
```

```
cd ...или ...mkdir ....
```

```
git init
```

```
git remote add origin ...git pull origin main
```
